DATA 110 Week 8

Project 1

Plan, develop, and present your data visualization project.

Presentations are next week. Find the project instructions and rubric in the project folder.

Prof. Rebin Muhammad
Montgomery College

NEXT WEEK

Build your presentation around three choices

01

Question

What is one question your charts can answer?

02

Dataset

Which table contains the information you need?

03

Audience

Who needs this information, and what do they need to understand?

A clear presentation connects the question, the data, and the people who need the answer.

QUICK CHECK

Which question is ready for a chart?

A

What is going on with these penguins?

B

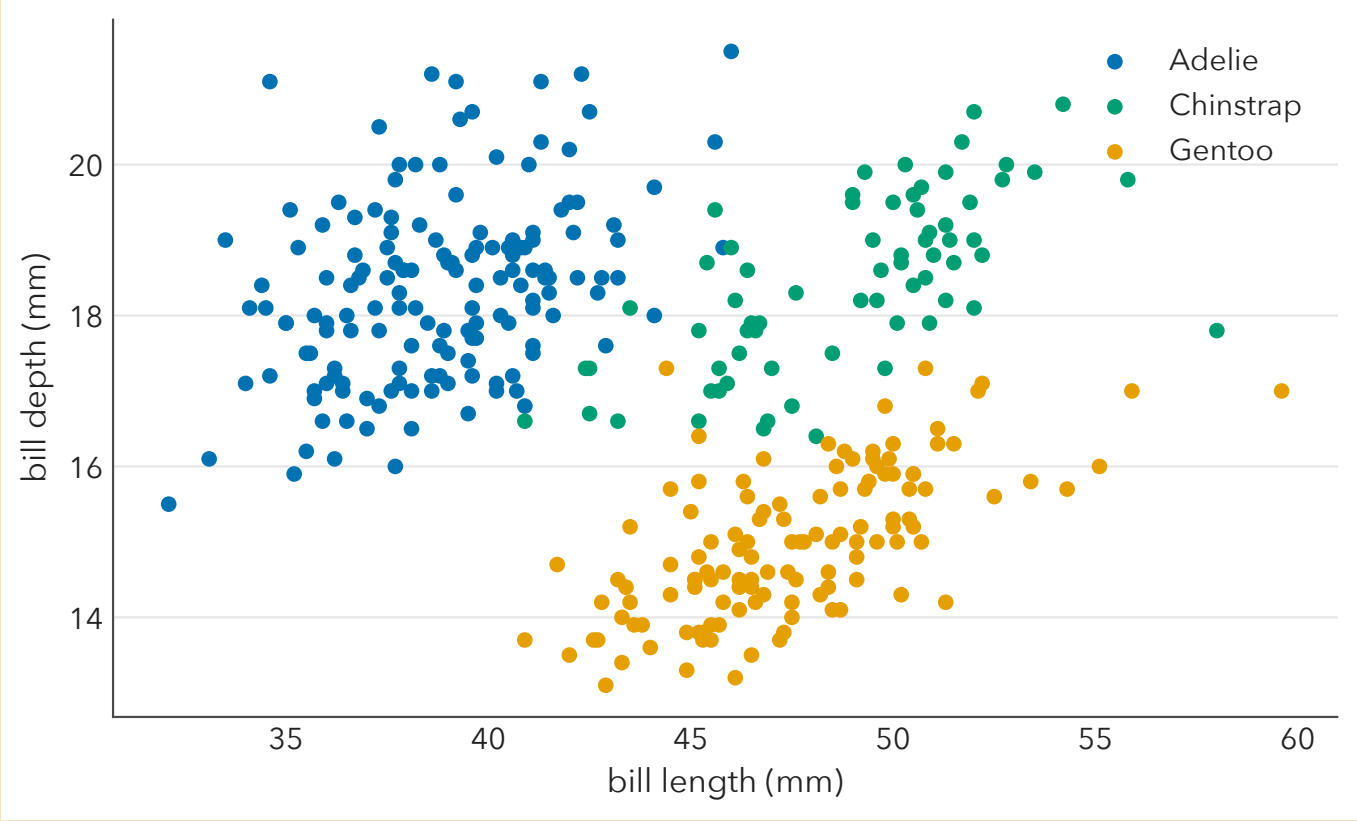

Are Gentoo bills longer and shallower than Adelie bills?

Choose A or B. What makes a question specific enough to explore with data?

FROM QUESTION TO CHART

B makes the comparison measurable

It names the two species and the two measurements. A chart can help us compare bill length and depth.

Average bill measurements Adelie: 38.8 mm long, 18.3 mm deep | Gentoo: 47.5 mm long, 15.0 mm deep

CAPTIONS

A good caption states the result

WEAK · NAMES THE CHART

Scatterplot of penguins.

STRONG · STATES THE RESULT

On average, Gentoo penguins have longer, shallower bills than Adelie penguins.

A caption should help readers understand what the chart shows, not just name the chart type.

THE CHART

Choose a chart that measures the question

WEAK · COUNTS SPECIES

Number of birds in each species

STRONG · MEASURES THE BILLS

Bill length compared with bill depth

Counting species does not measure bill length or depth.

THE ENDING

The conclusion answers the question

WEAK · TOO GENERAL

Penguins are different.

STRONG · ANSWERS THE COMPARISON

On average, Gentoo bills are longer and shallower than Adelie bills.

Then name a limitation: this chart shows the difference, but it does not explain why it exists.

THE REPORT

Four parts, in this order

01

Introduction

Set up the question, the data, and the audience.

02

Exploration

Show what you checked before trusting the chart.

03

Captions

State the claim beside each figure.

04

Conclusion

Answer the question and note what the chart cannot show.

BEFORE YOU LEAVE

Put these three things on paper

01

Your question

Write it as one clear sentence.

02

Your dataset

Write down the name of the data you'll use.

03

A draft plot

Add a caption that states your claim.

Presentations are in Week 9. Bring the plots that help answer your question.
